

FernDog House Training Key Points

1

Remember, 95% of accidents in the house are our fault – learn from each one

2

Keep your puppies world small and slowly expand as he does good

3

Eyes on the dogs at all times! If you can't supervise, confine.

4

Monitor water intake carefully – what goes in will come out

5

Your dog's age in months = the number hours he can hold it in (waking hours)

6

Dogs tend to frequent the same spots to pee so keep your pup away from areas in the house that he's gone before

7

If you puppy takes one sip of water get him outside soon (8 week old puppy - 10 minutes, 12 week old pup – 25 minutes)

8

If you think you puppy has to go but he doesn't go outside, crate him and take him out again in 20 minutes
